

#Building the Future

Sofrena - Sociedade De Afretamentos E Navegação, S.A.

PROJECT DESCRIPTION:

Technological adaptation of the vessel Ilha da Madeira, a maritime and coastal cargo ship, with the aim of significantly reducing its environmental impact by replacing fossil fuels, improving energy efficiency, and further cutting emissions.

OBJECTIVES AND RESULTS:

With the implementation of this project, an estimated 40% reduction in fossil fuel-derived CO2 emissions is expected, contributing to carbon neutrality targets and transforming the vessel into a zero-emissions ship. This initiative promotes the decarbonisation of maritime transport, aligning its operational profile with the climate transition and carbon neutrality objectives established by the PRR.

FINANCIAL INCENTIVE: 1,153,191.4 EUR
